

Coding Challenge : Built in Function Python

◆ Challenge 1: Flatten a Nested List

Concepts: list comprehension

Problem:

```
nested = [[1, 2], [3, 4], [5]]
```

Expected Output:

```
[1, 2, 3, 4, 5]
```

◆ Challenge 2: Check Anagram

Concepts: sorted()

Problem:

Check if two strings are anagrams.

```
s1 = "listen"
```

```
s2 = "silent"
```

Expected Output:

```
True
```

◆ Challenge 3: Find Missing Number

Concepts: set()

Problem:

```
nums = [1, 2, 4, 5]
```

👉 **Expected Output:**

```
3
```

Hint:

Compare with full range using set difference.

◆ **Challenge 4: Group Words by First Letter**

Concepts: dict,.setdefault()

Problem:

```
words = ["apple", "ant", "banana", "bat"]
```

Expected Output:

```
{'a': ['apple', 'ant'], 'b': ['banana', 'bat']}
```

◆ **Challenge 5: Remove Empty Values**

Concepts: dictionary comprehension

Problem:

```
data = {"a": 1, "b": None, "c": 3, "d": None}
```

Expected Output:

```
{'a': 1, 'c': 3}
```
